This graph shows the distribution by cited year of citations to items published in the journal ATEN PRIM.

Citations to the journal (per cited year)

- The white/grey division indicates the cited half-life (if < 10.0). Half of the journal's cited items were published more recently than the cited half-life.
- The top (gold) portion of each column indicates Journal Self Citations: citations to items in the journal from items in the same journal.
- The bottom (blue) portion of each column indicates Non-Self Citations: citations to the journal from items in other journals.
- The two lighter columns indicate citations used to calculate the Impact Factor (always the 2nd and 3rd columns).

**Impact Factor -- see below for calculations*

The journal impact factor is a measure of the frequency with which the "average article" in a journal has been cited in a particular year. The impact factor will help you evaluate a journal's relative importance, especially when you compare it to others in the same field. For more bibliometric data and information on this and other journal titles click on the "Return to Journal" button.

NOTE: Title changes and coverage changes may result in no impact factor for one or more years in the above graph.

2009 Impact Factor

Cites in 2009 to articles published in:	2008 = 45	Number of articles published in:	2008 = 86
	2007 = 48		2007 = 127
	Sum: 93		Sum: 213
Calculation: $\frac{\text{Cites to recent articles}}{\text{Number of recent articles}} = \frac{93}{213} = 0.437$
